

Data Collection and Preprocessing Phase

Team ID	MCA
Project Title	Strategic Employee Attrition Intelligence Dashboard
Maximum Marks	3 Marks

Data Quality Report Template

The Data Quality Report will assess the employee attrition dataset to ensure that employee, compensation, workload, engagement, career progression, and work arrangement data are accurate and consistent. It will identify data quality issues that may affect attrition analysis and define appropriate technical resolution plans to support reliable identification of the factors associated with employee turnover.

Data Source	Data Quality Issue	Severity	Resolution Plan
Employee attrition Dataset	The dataset contains 5,000 employee records, of which 895 employees have left, giving an overall attrition rate of 17.9%. This outcome needs to be accurately represented in the dashboard.	High	Validate the employee and attrition counts and create dashboard measures for Total Employees, Employees Left, Retained Employees, and Attrition Rate.
Employee attrition Dataset	Employee engagement and well-being factors may have a relationship with attrition. Different engagement, burnout, and work-life balance scores need to be analyzed consistently.	High	Verify score ranges and data types, then compare engagement and well-being measures between retained and departed employees.

Employee attrition Dataset	The dataset contains employee information related to compensation, such as monthly income and salary-related factors. These variables need to be properly validated before determining whether compensation is associated with employee attrition.	High	Validate the compensation fields, check their data types and ranges, and compare compensation levels between employees who stayed and employees who left.
Employee attrition Dataset	Workload-related variables such as overtime and working conditions may influence an employee's decision to leave. These variables need to be prepared consistently for analysis	High	Validate workload-related numerical fields and create suitable workload categories. Analyze attrition rates across different workload levels.
Employee attrition Dataset	Career progression information, including years at the company and promotion-related variables, needs to be examined to determine whether limited growth is associated with employee turnover.	Moderate	Validate career-related fields and create experience or career-growth categories. Compare attrition across different career progression levels.
Employee attrition Dataset	The Attrition field represents the main outcome of the project. Incorrect or inconsistent representation of this field could affect the calculation of the employee turnover rate.	High	Standardize the Attrition values and create an Attrition Flag for reliable calculations of total employees who left and overall attrition rate.
