

Report

Date	20 September 2026
Team ID	MCA
Project Name	Strategic Employee Attrition Intelligence Dashboard
Maximum Marks	5 Marks

A report is a structured presentation of data analysis, findings, and insights. In this project, Power BI is used to analyze employee retention and attrition patterns. The report presents employee-related information through interactive charts, KPI cards, and filters to make the analysis clear and easy to understand.

The report focuses on factors such as **burnout score, work-life balance, engagement score, manager support, salary growth, education level, work mode, tenure, overtime, performance rating, age, career level, and department.**

The Power BI report is designed using different visualizations to analyze employee attrition and retention. KPI cards are used to display important employee metrics, while charts are used to compare attrition across different employee characteristics.

Interactive slicers such as **Education Level, Work Mode, Gender, and Marital Status** allow users to filter the report and perform detailed analysis.

The Power BI report provides valuable insights into employee attrition and retention patterns by analyzing key employee and workplace factors.

1. Salary Growth

The dashboard shows that the 0–5% salary hike group has the highest displayed attrition rate of 0.30. The attrition rate decreases across the higher salary-growth categories. This indicates that salary growth is an important factor to consider when analyzing employee attrition patterns.

2. Work Mode

The dashboard compares attrition across Onsite, Hybrid, and Remote work modes. The displayed attrition rates are 0.21 for Onsite, 0.17 for Hybrid, and 0.15 for Remote. This shows that attrition rates vary across different working arrangements.

3. Overtime

The dashboard analyzes attrition according to the number of overtime hours worked by employees. The 21–30 hours overtime group has the highest displayed attrition rate of 0.54. Other overtime groups show lower displayed rates, allowing the relationship between additional working hours and attrition to be examined.

4. Performance Rating

The dashboard compares employee attrition across different performance ratings. The displayed attrition rate decreases from 0.29 for rating 2 to 0.07 for rating 5. This

provides an overview of how attrition patterns differ across employee performance levels.

5. Burnout

The dashboard categorizes employees according to their burnout levels. The Very High burnout category shows the highest displayed attrition rate, while the other burnout categories show comparatively different rates. This highlights burnout as an important factor to consider when analyzing employee retention.

6. Career Level

The dashboard compares employee attrition across career levels 1 to 5. The visualization helps identify how attrition patterns change as employees move through different career levels. It provides a useful view of retention patterns at different stages of an employee's career.

7. Department

The dashboard provides a comparison of employee attrition across different departments. The overall displayed attrition rate is 0.18. Departments such as Customer Support, Sales, Marketing, Finance, Human Resources, Operations, Research & Development, and Engineering can be compared to understand differences in attrition patterns.

8. Employee Metrics

The dashboard provides several key employee metrics. The average Burnout Score is 4.03, Engagement Score is 6.51, Manager Support Score is 6.61, Average Age is 37.12 years, and Average Work Experience is 11.70 years. These indicators provide an overall understanding of employee characteristics and workplace conditions and can be considered alongside attrition patterns.

Example:

1. Salary Growth Analysis:

- The 0–5% salary growth group has the highest displayed attrition rate of 0.30. The attrition rate decreases across the higher salary-growth categories.

2. Work Mode Analysis:

- The displayed attrition rates are 0.21 for Onsite, 0.17 for Hybrid, and 0.15 for Remote. This shows differences in attrition across different working arrangements.

3. Overtime Analysis:

- The 21–30 hours overtime group has the highest displayed attrition rate of 0.54. This helps identify differences in attrition patterns across overtime levels.

4. Performance Rating Analysis:

- The displayed attrition rate decreases from 0.29 for rating 2 to 0.07 for rating this shows how attrition patterns vary across different employee performance ratings.
